WHAT I DO

Backend Software Engineer with 4+ years of experience. I build and operate production backend systems — fintech on AWS Serverless and healthcare backends — including payment, credit facility, POS, and 40+ integrations with banks, partners, and enterprise platforms as the primary backend engineer at PT 360 Teknologi Indonesia (client: Indogrosir). Open to full-time roles, international remote work, and consulting.

PROVEN OUTCOMES

- **Scale** — 150+ production APIs and 50+ system integrations with banks, partners, and enterprise platforms across fintech and healthcare
- **Ownership** — 10+ financial service projects owned end to end — architecture, implementation, and production delivery
- **Speed** — projects typically delivered in about half the planned time across a multi-year enterprise engagement; 40+ integrations with zero missed deadlines
- **Efficiency** — report generation 700% faster through MongoDB query tuning and materialized views on a healthcare platform
- **Reliability** — automated cleanup of 10,000+ appointment records with zero data loss; 30+ production issues resolved
- **Modernization** — led the migration of 3 AWS Lambda projects into one NestJS platform — 50+ APIs rebuilt, auth re-engineered, OpenTelemetry observability

SERVICES

Backend APIs	: REST APIs and backend services — Node.js, NestJS, Express.js, Laravel, TypeScript
Integrations	: Bank, payment, and partner systems with OAuth 2.0, JWT, HMAC, RSA, AES-256; webhooks
AWS Serverless	: Lambda, SQS, SNS, API Gateway, S3; Docker, Kubernetes, RabbitMQ
Databases	: Query tuning, schema design, caching — PostgreSQL, MySQL, MongoDB, Redis
Modernization	: Refactored 10+ legacy services to clean architecture; Lambda-to-NestJS migration
Internal platforms	: Operations dashboards built from scratch — Laravel + React + Inertia.js; 150+ features for 20+ users
Architecture consulting	: Architecture and technology choices grounded in hands-on production delivery

VERIFIABLE PROOF

- Enterprise case studies (NDA): NestJS migration, AWS Serverless financial platform, internal monitoring platform, AUDY healthcare system — muhammadyogi.vercel.app
- E-Commerce Platform (MERN) — React, Node.js, Express.js, MongoDB — github.com/yogigaek/ecommerce-app
- E-Commerce Platform (PHP) — catalog, admin dashboard, WhatsApp purchase flow — github.com/yogigaek/App-Market-Place
- Portfolio, CV, and colleague recommendations (Tech Lead at IFG Life, Backend Engineer at Bank Danamon) — muhammadyogi.vercel.app

HOW I WORK

- Start with a short WhatsApp chat or an introductory call — <wa.me/6282169713434>
- Scope, timeline, and code ownership agreed in writing before any work starts
- Delivery against agreed milestones, with regular reviews and transparent progress
- Complete handover at the end: source code, documentation, and deployment details
