## SUMMARY

---

Backend Software Engineer with 4+ years of experience delivering mission-critical financial and healthcare systems at enterprise scale. Specialized in AWS Serverless architectures, distributed system design, and complex API integrations. Primary backend engineer responsible for 10+ end-to-end financial service systems — architecting, building, and shipping 150+ production APIs and 50+ system integrations across banks, payment networks, and enterprise partners — consistently ahead of schedule.

## WORK EXPERIENCE

---

### PT 360 Teknologi Indonesia

Jun 2023 – Present

*Backend Software Engineer | Client: Indogrosir (Retail Financial Systems)*

*Jakarta, Indonesia · Remote*

- Engineered 100+ production RESTful APIs across payment processing, credit facilities, POS systems, and 40+ bank & partner integrations
- Owned 10+ financial service projects end-to-end — from system architecture and implementation to production deployment and ongoing maintenance
- Integrated 40+ enterprise systems (banks, payment networks, and partners) fulfilling all contractual SLAs with zero missed deadlines across a multi-year engagement
- Delivered every project 2x ahead of schedule, enabling early partner onboarding and accelerating revenue timelines
- Architected cloud-native, event-driven financial systems on AWS Serverless — Lambda, SQS, API Gateway, S3, SNS — designed for high-throughput transaction processing
- Implemented multi-protocol security across all 40+ integrations per partner requirements: OAuth 2.0, HMAC-SHA256, JWT RS256, RSA, and AES-256-GCM
- Designed and built an internal monitoring and operations platform from scratch using Laravel, React Inertia, PostgreSQL, and MySQL — serving 20+ internal users and replacing fragmented legacy tools
- Refactored 10+ legacy services to clean architecture — significantly improving code maintainability, testability, and deployment reliability across the platform
- Initiated and architected NestJS migration from fragmented Lambda microservices — consolidated 3 standalone projects into a unified monolith with OpenTelemetry observability

### Assist.id (PT Teknologi Media Medika)

Jul 2022 – Apr 2023

*Backend Software Engineer*

*Pekanbaru, Indonesia · On-site*

- Built 50+ RESTful APIs for the AUDY healthcare system serving thousands of patients, using Node.js, LoopBack, Express.js, and MongoDB
- Achieved 700% improvement in reporting performance by fully rewriting MongoDB aggregation pipelines and introducing materialized views
- Engineered automated data cleanup jobs that processed 10,000+ appointment records with zero data loss, eliminating manual operations overhead entirely
- Integrated 10+ third-party services including insurance providers, notification services, and external APIs
- Resolved 30+ production issues while maintaining system stability and uptime throughout the engagement
- Refactored legacy backend modules to improve code quality, maintainability, and deployment reliability

### Eduwork

Jan 2022 – Jul 2022

*Full-Stack Developer · Bootcamp*

*Yogyakarta, Indonesia*

- Completed an intensive full-stack engineering bootcamp covering JavaScript, Node.js, React, and MongoDB; built 3+ web applications including a full-featured e-commerce platform
- Sharpened algorithmic problem-solving skills through 200+ challenges on LeetCode, HackerRank, and Codeforces

## EDUCATION

---

### University of Lancang Kuning

Pekanbaru, Indonesia

*Bachelor of Computer Science, Informatics Engineering | GPA: 3.28 / 4.00*

*Dec 2021*

## TECHNICAL SKILLS

---

**Languages:** TypeScript, JavaScript, PHP, SQL, Go

**Backend & Frameworks:** Node.js, NestJS, Express.js, Laravel, LoopBack, REST API Design, API Integration, Microservices, Clean Architecture

**Cloud & Infrastructure:** AWS Lambda, AWS SQS, AWS API Gateway, AWS S3, AWS SNS, CloudWatch, Serverless Framework, Docker, Kubernetes, RabbitMQ

**Databases:** PostgreSQL, MySQL, MongoDB, Mongoose, Redis, Prisma ORM, Query Optimization, Database Design

**Security & Auth:** OAuth 2.0, JWT, HMAC-SHA256, AES-256-GCM, RSA Encryption

**Tools & Practices:** Git, Swagger/OpenAPI, Jest, Supertest, k6, CI/CD, Prometheus & Grafana, System Design, Event-Driven Architecture, OpenTelemetry
