MUHAMMAD YOGI

Backend / Full-Stack Engineer | Fintech & Healthcare | Node.js · NestJS · PHP/Laravel · Go · Python · AWS
Pekanbaru, Indonesia (UTC+7) • Email • WhatsApp • LinkedIn • GitHub • GitLab • LeetCode • Portfolio

SUMMARY

Backend / Full-Stack Engineer with 4+ years building production systems that move money: 150+ APIs and 50+ system integrations across fintech and healthcare. Backend engineer for 10+ financial service projects on AWS Serverless (Node.js/NestJS, PHP/Laravel), with 40+ bank and partner integrations and zero missed deadlines. Led a Lambda-to-NestJS platform migration, built an internal operations platform from scratch, and made healthcare reporting 700% faster. Open to full-time backend and full-stack roles and consulting.

EXPERIENCE

PT 360 TEKNOLOGI INDONESIA · Client: Indogrosir — **JAKARTA, ID (REMOTE)**
Backend Software Engineer | Full-time — **Jun 2023 – Present**

- Owned the full lifecycle of 10+ financial service systems, from system architecture and implementation to production deployment and ongoing maintenance
- Engineered 100+ production REST APIs across payment processing, credit facilities, and POS systems
- Integrated 40+ internal and external systems (banks, payment networks, enterprise platforms), meeting all contractual SLAs with zero missed deadlines across a multi-year engagement, and secured each per partner requirements: OAuth 2.0, HMAC-SHA256, JWT RS256, RSA, and AES-256-GCM
- Delivered projects ahead of schedule, typically in about half the planned time, enabling early partner onboarding and accelerating revenue timelines
- Architected cloud-native, event-driven financial systems on AWS Serverless (Lambda, SQS, SNS, API Gateway, S3, Secrets Manager) with RabbitMQ, designed for high-throughput transaction processing
- Built the full settlement pipeline: client apps through API Gateway, Lambda processing, PostgreSQL persistence, outbound bank API calls, S3 document storage, and MFT settlement file exchange
- Led and architected the migration of 3 standalone Lambda projects, each serving a distinct financial partner, into one NestJS platform: 50+ of the platform APIs rebuilt in TypeScript with Prisma ORM, authentication flows re-engineered, and OpenTelemetry observability added while preserving every integration contract
- Designed and built an internal monitoring and operations platform from scratch (Laravel, React + Inertia.js, PostgreSQL, MySQL): 150+ features, with multi-database switching, AWS integration (S3, SES, SQS, QuickSight), and vendor/bank API connectivity, replacing fragmented legacy tools
- Designed and built Application Gateway from scratch (Laravel, React + TypeScript, PostgreSQL): an internal platform for managing payment integrations, credentials, and client API keys across environments, with role-based access, two-factor authentication, audit logging, and 800+ automated tests
- Refactored 10+ legacy services to clean architecture, improving code maintainability, testability, and deployment reliability
- Backed services with Jest and Supertest tests, k6 load tests, Swagger/OpenAPI documentation, and Prometheus, Grafana, and CloudWatch monitoring

Stack: Node.js, NestJS, TypeScript, Laravel, PHP, React, AWS Lambda/SQS/SNS/API Gateway/S3/ECR, Serverless Framework, PostgreSQL, MySQL, Redis, Prisma ORM, RabbitMQ, Docker, Kubernetes, OpenTelemetry

PT TEKNOLOGI MEDIA MEDIKA (ASSIST.ID) — **PEKANBARU, ID (ON-SITE)**
Backend Software Engineer | Full-time — **Jul 2022 – Apr 2023**

- Owned API development, performance engineering, and service integrations for AUDY, a healthcare management platform for clinics and hospitals
- Built 50+ REST APIs spanning core platform operations, reporting pipelines, third-party integrations, and insurance notification delivery with EJS-templated messages
- Achieved a 700% improvement in reporting performance by fully rewriting MongoDB aggregation pipelines and introducing materialized views
- Engineered automated cleanup jobs (node-cron) that processed 10,000+ appointment records with zero data loss, eliminating manual operations overhead
- Integrated 10+ third-party services, including insurance providers, notification services, and external APIs
- Resolved 30+ production issues while maintaining system stability and uptime, and refactored legacy backend modules to improve maintainability and deployment reliability

Stack: Node.js, JavaScript, LoopBack, Express.js, MongoDB, Mongoose, Redis, JWT, node-cron, EJS

SELECTED CASE STUDIES (enterprise, under NDA — details in the Portfolio)

- **Credit Facility Platform — NestJS Migration**: 3 Lambda projects → 1 NestJS monolith · 50+ APIs migrated · auth re-engineered · full observability
- **Financial Platform — AWS Serverless**: payment, credit & POS · 100+ production APIs · 40+ system integrations · typically ~2x faster than planned
- **Application Gateway**: payment integration platform · built solo · 800+ automated tests · 2FA & audit log
- **Internal Monitoring Core Platform**: built from scratch · 150+ features · replaced a legacy platform
- **AUDY Healthcare System**: 700% faster reporting · 10,000+ records automated · 30+ issues resolved · zero data loss

TECHNICAL SKILLS

Languages : TypeScript/JavaScript, PHP, Go (Golang), Python
Backend : Node.js, NestJS, Express.js, Laravel, LoopBack, Lambda Function, Zod, class-validator
DevOps/Cloud : AWS Lambda, SQS, SNS, API Gateway, S3, ECR, Secrets Manager, CloudWatch, Serverless Framework, Docker, Kubernetes
Databases : PostgreSQL, MySQL, MongoDB, Redis, Prisma ORM, Mongoose, query optimization, schema design
Messaging : RabbitMQ, WebSocket, API integration, webhook integration, MFT file exchange
Architecture : REST API design, system design, clean architecture, microservices, distributed systems, event-driven
Security : OAuth 2.0, JWT (RS256), HMAC-SHA256, AES-256-GCM, RSA encryption
Testing : Unit/integration testing, Jest, Supertest, k6, Postman, Swagger/OpenAPI
Tools : OpenTelemetry, Prometheus & Grafana, Git, CI/CD, performance tuning, AI-assisted development
Frontend : React, Inertia.js, Tailwind CSS, Material UI

EDUCATION

UNIVERSITAS LANCANG KUNING — PEKANBARU, ID
Bachelor of Computer Science, Informatics Engineering — **2017 – 2021**

- Coursework: Data Structures, Algorithms, Database Systems, Software Engineering, Computer Networks

EDUWORK — YOGYAKARTA, ID
Full-Stack Web Development Bootcamp — **Jan 2022 – Jul 2022**

- Built full-stack MERN applications and REST APIs through hands-on projects, including a full-featured e-commerce platform
- Solved 200+ algorithm challenges on LeetCode, HackerRank, and Codeforces

PERSONAL PROJECTS

- **Rakit — e-bike parts store (open source)** — Live demo · GitHub: React storefront with a 3D bike configurator drawn in three.js and a NestJS API on PostgreSQL. Prices, compatibility rules, and stock are decided on the server; checkout takes each part's stock with a guarded update in one transaction and is idempotent, Midtrans notifications are accepted only with a valid SHA-512 signature and the exact amount, and unpaid orders expire and release their stock; API tests against a real database and Playwright browser tests in CI. TypeScript, React, three.js, NestJS, Prisma, PostgreSQL, Midtrans, Playwright, GitHub Actions
- **Webhook Relay (Go, open source)** — GitHub: receives payment-provider webhooks, verifies HMAC signatures with a replay window, stores each event once in PostgreSQL (safe under concurrent duplicates), and relays it with retries, exponential backoff, and a dead-letter state; OpenTelemetry tracing and CI against a real database. Go, PostgreSQL, pgx, OpenTelemetry, Docker, GitHub Actions
- **E-Commerce Platform (MERN)** — GitHub: product search and filtering, cart, checkout, order history with invoices, customer dashboard, and an Express API with JWT auth and admin-only product management. React, Node.js, Express.js, MongoDB, JWT, Redux
- **E-Commerce Platform (PHP)** — GitHub: marketplace with catalog, category management, admin CRUD, and a WhatsApp-based purchase flow. PHP, MySQL, CKEditor

RECOMMENDATIONS

- "… He has a very broad knowledge of system architecture, performance optimization, and security. Yogi is always passionate about completing projects, and his excellent communication skills make collaboration smooth." — **Fajri Illahi**, Tech Lead, IFG Life
- "… Yogi has a strong understanding of databases, APIs, and system integration. When working with him, I always see dedication in creating efficient and scalable solutions." — **Fadhlillah I.**, Backend Engineer, PT Bank Danamon Indonesia, Tbk.
